Dave and Patrick,

Please find attached an AutoCAD file "XB-1896069P01T01-BA-SV-MASTER.zip". Dan Miller requested that I forward this preliminary drawing to you for your use at this time. Dan has this drawing in a hard copy format. This drawing does not yet include the easements identified in the title reports.

The information contained in the blocks for storm and sanitary structures reflect what we have visually seen inside each structure. The use of question marks indicates that the size and/or material of the lines could not be determined. The underground route of lines connecting the structures is not always known.

We have included contour lines between the top and the toe of the slopes bordering the shoreline, although we did not attempt to map the irregularities of these slopes.

Should you have questions regarding the map, please do not hesitate in calling me at (360) 377-0014.
